

UNDETECTABLE = UNTRANSMITTABLE

In 2017, HIVMA endorsed the *U=U Consensus Statement*, saying definitively that when a person living with HIV has an undetectable viral load, they will not transmit HIV.

The science is clear.

HPTN 052

PARTNER

Opposites Attract

PARTNER 2

Combined data from 2008-2016 show that **there were ZERO linked HIV transmissions** after more than a **hundred thousand condom-less sex acts** within both heterosexual and male-male serodiscordant couples where the partner living with HIV had a **durably undetectable viral load**.

But the need remains great.

- Only **11%** of young adults 18-30 believe that ART is “very effective” in preventing HIV.
- Only **50%** of people living with HIV are engaged in care and virally suppressed.

*“The body of scientific evidence to-date has established that there is **effectively no risk of sexual transmission of HIV** when the partner living with HIV has a durably undetectable viral load, **validating the U=U message of HIV treatment as prevention.**”*

*Anthony S. Fauci, MD  
July 2018*

## Why Is U=U Important?

- Knowing U=U can be **transformative** for people living with HIV (PLWH) and their interpersonal relationships. This affirms that they are not disease vectors and can be touched and loved.
- Many PLWH still face both institutional & personal **stigma and discrimination**. As a result, many avoid relationships, sexual or otherwise, because of their perceived potential to transmit HIV.

## Talk to Your Patients about U=U

- Counsel them on the necessity of **staying undetectable** for U=U to work.
- Educate them on the importance of taking HIV medications every day **to stay healthy and also prevent transmission** to their sexual partners.
- Explain and reinforce that when the virus is suppressed, **they will not transmit HIV** to partners.
- **Encourage patients to know their viral load** by keeping their medical appointments so they and their partners are sure of their undetectable status.

*“Not sharing this with your patients is withholding data that are life-saving, life prolonging, and stigma erasing.”*
